483

Select your driver with following steps

484

STEP 1

SELECT TYPE OF DRIVER (12V OR 24V)

Collection	Type of driver
Centonze, Marron, Comète, Poire, Fleure, Fleure Twin, Fiston, Monet, Grille, Subtile, Charmond (retrofit), Macro	12V
Matisse, Pipilier, Beautique, Galed, Charmond (integrated), Eclips	24V

STEP 2

CALCULATE TOTAL POWER CONSUMPTION OF THIS CIRCUIT

How many products (N) do you combine on 1 driver?
Total power consumption = N x power consumption of 1 product

STEP 3

CALCULATE REQUIRED DRIVER CAPACITY

LED lamp: use maximum 50% of total nominal power of the driver
Halogen lamp: use 100% of total nominal power of the transformer

STEP 4

LOCATION OF THE DRIVER / TRAFO

Indoor, outdoor or in the ground

EXAMPLE: Installation of 4 Centonze LED-spot with a bulb of 12W each in a living room

- Step 1

Centonze requires 12V driver
- Step 2

Total power consumption = 4(N) x 12W (power consumption of 1 product) = 48W
- Step 3

LED lamp, only 50% of driver power can be used. Total required driver capacity is 2x48W=96W
- Step 4

Indoor application (living room)
- Result

Drivers TOETRAP10 (rectangular) or TOETRAR10 (round) can be used
