VENEER

PR-Veneer used panels are a range of ready-to-use veneered panels produced in Belgium for interior applications marked by contemporary designs, a high and consistent quality and easy processing. PR-veneer has the desired look and benefits of a panel made with solid hardwood lumber without any disadvantages. PR-veneer panels guarantee uniform quality with the natural, lively appearance of wood, both visually and sensorial. They fit easily into any commercial, retail, hospitality or residential project and offers limitless possibilities for millwork applications such as living, bedroom and office interiors.

A GENUINE WOOD TOP LAYER

The top layer of PR-veneer is a sheet of real wood veneer assembled according an unique mix match technique developed over decades of experience. The surface is gently brushed, stained and lacquered. The result is a pleasant touching surface where the protection, the natural feel and exclusive appearance of the wood are well-balanced.

SUSTAINABLE SOLUTION

As a leading manufacturer of furniture products with dealers worldwide, we are aware of our responsibilities in terms of our environmental impact. Respect for nature and ecologically sound business practices are an unconditional basic principle. There is used exclusively green energy for the production of the panels as solar energy on the roof of production halls and externally purchased green energy. For staining and lacquering is chosen the most environmentally friendly technology without harmful emissions. Both the MDF core and the

top layer in real wood are FSC certified to guarantee responsible forestry. The glues, stains and varnishes that are used to make PR-veneer do not contain any harmful VOCs (volatile organic compounds)

TECHNICAL DETAILS

Composition: Top layer of real wood veneer stained and UV protected with six layer of UV lacquer, a core of MDF with density of 730 kg/m³ and a backing layer veneer. The double-sized panels are both sides equally finished with the same design.

MAINTENANCE TIPS

Normal maintenance involves no more than removing dust with soft, dry cloth. A slightly damp cloth can be used, but be careful not to use too much water. If liquids are spilled, its recommended that they should be dried off immediately. Tough dirt can be removed using water and a mild cleaning agent or a detergent. Never use a cleaning based on acetone or ethyl butyl acetate. Wax and oil can also cause damage.

STONE

PR-stone, versatile porcelain surfaces combining the beauty of Nature with technological innovation. When nature meets technical innovation the result is PR-stone, a porcelain stoneware surface developed to fulfill a wide change of applications. A material that seeks to combine the functionality and performance of the material while allowing maximum scope for customization. PR-stone opens the door to exceptional creativity versatility in aesthetics and color, a range of surfaces with various designs to suit the most varied of styles.

SUBSTAINABLE SOLUTION

Made from a natural blend of selected ceramic clays and mineral-based colors, PR-stone sintered surfaces combine the typical characteristics of porcelain stoneware – long-lasting and stable, resistant to high temperatures, atmospheric stress and UV rays, waterproof, highly resistant to stain and scratches hygienic and easy to clean – with appearance of natural stone.

MAINTENANCE TIPS

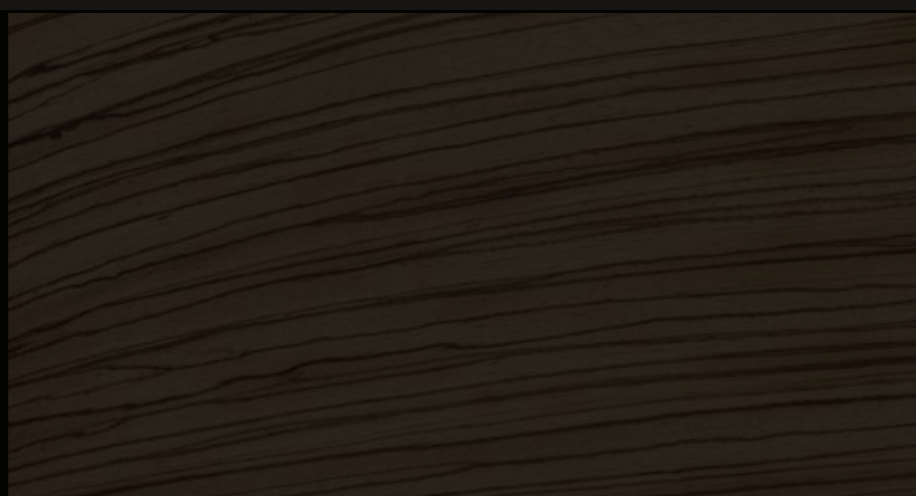

The material is high temperature resistant. However is always advisable to use an adequate pan-support whenever hot cookware be placed on the top surface. For daily cleaning, a damp microfibre cloth is enough. For regular cleaning, we suggest using a neutral liquid detergent with a soft sponge or a microfibre cloth. Persistent stains can be removed with a slightly abrasive sponge. If necessary, use a specially formulated stain remover. Remove any spills of staining liquids (like coffee, tea, red wine), caustic substances, acids and colorants as soon as possible and rinse with water.
